Summary

Staff engineer and team lead with 10+ years architecting scalable, distributed, multi-tenant SaaS platforms. Leads teams through spec-driven development, working with AI to build engineering workflows that cut effort and raise productivity. Ships LLM-powered analytics and turns ambiguous goals into phased roadmaps teams can execute.

Skills

- **Languages & Frameworks:** Python, JavaScript, TypeScript, Java, C++, Node.js, Express.js, Django, Flask, FastAPI, Vue 3, React
- **Cloud & DevOps:** AWS (SES, S3, Lambda, EC2), Docker, Terraform, GitHub Actions, New Relic, Sentry
- **AI-Assisted Development:** Claude Code, Cursor, spec-driven development, agent skills, LLM APIs
- **Data & Messaging:** MongoDB (NoSQL), PostgreSQL, MySQL, Redis, Celery, RabbitMQ, ActiveMQ

Professional Experience

Staff Engineer / Team Lead, *Coursedog (acq. ClassRanked)* **New York (Remote)** *04/2026 - present*

- Leading architecture of Coursedog's next-gen Course Evaluations product for 100+ institutions and 500k+ students.
- Leading a team of 2 engineers and setting technical direction within a larger engineering org; partnering with Product on phased delivery (MVP, V2, beyond) and owning estimation.
- Authored RFCs weighing design tradeoffs for CE's data model and permissions, gathering feedback from platform, infrastructure and integration teams before presenting to Product and leadership.
- Designed MongoDB collections for Course Evaluations (versioned question banks, revision-aware indexes, backfill migrations) and led a data-modeling session with MongoDB's architects.
- Drove AI-assisted tooling and automation for well-tested code (spec-driven development, a screenshot/video review skill, AI error triage), cutting median PR approval from about 4 days to 2 hours.

Principal Engineer (from Lead), *Classranked LLC* **Salt Lake City, UT (Remote)** *10/2024 - 03/2026*

- Scaled the platform from 4 to 60 institutions and 300k+ students, owning backend architecture strategy.
- Architected microservice-based components to isolate critical workflows and improve service resiliency during peak evaluation loads—raising student survey completion rates from under 40% to over 60%.
- Built attribute-based analytics that cut reliance on external BI tools by 70%+ and deepened institutional reporting.
- Integrated a hosted LLM for qualitative comment analysis in reports and started chatbots over evaluation data.
- As technical lead of 4 engineers, set architecture standards through design reviews, supported hiring and performance reviews, and mentored engineers, delivering two major releases with all committed features shipped.

Senior Software Engineer, *Classranked LLC* **Salt Lake City, UT (Remote)** *03/2023 - 09/2024*

- Ran EC2-based pilots across 5 institutions, delivering zero-downtime evaluation cycles with reliable reporting—converting 4 into full-time paying customers.
- Built fine-grained RBAC/ABAC for feature-level access control across surveys, reporting, and setup, meeting R1 governance needs.
- Reduced page-load latency by 45% through query optimization, caching, and infrastructure upgrades.
- Designed and built the end-to-end "15-minute or less" institutional survey-setup feature—adding auto-syncing, reusable term-over-term settings, and guided workflows that reduced manual setup effort from 1–2 days to under 15 minutes.

Earlier: Software Engineer, ClassRanked (2022–2023); Research Assistant, Old Dominion University (2017–2021); Software Developer, Harman Connected Services (2015–2017).

Education

M.S. in Project Management *University of Cumberlands* **Williamsburg, KY** *Aug 2026*

M.S. in Computer Science *Old Dominion University* **Norfolk, VA** *Dec 2021*
